## SCP Series Solar Powered Centrifugal Pool Pumps

**SunPumps** manufactures a variety of DC powered centrifugal surface pumps. Among the most popular are the SCP series pool pumps. They will replace almost any AC powered pool pump and because they get their power from the sun, you will save on your power bill. They are available from 1/2 to 3 horse power and operate on 100 to 3000 watts of DC power.

**SunPumps** SCP series pool pumps are equipped with heavy duty permanent magnet, DC motors with long-life brushes. The motors are close-coupled to the pump end thus eliminating the need for base plates, belts and pulleys.

The SCP series pumps are single stage centrifugal type constructed from high

performance thermoplastic. They are extremely resistant to mineral and algae deposits while providing outstanding strength and durability. For added protection, a basket strainer is incorporated into the suction side of the pump. Simplicity is a key feature of the SCP series pumps. They are simple to install and field servicing is easily accomplished without the use of specialized tools.

**SunPumps** SCP series pumps can not only be used for pool water filtration, but for fountains, water features, pond aeration, circulating water for aqua culture or to irrigate small farms. They were designed for use as a stand-alone water delivery system. They are pollution-free, corrosion free, self-lubricating and quiet. There is no better way to provide water for remote homes, villages, small farms as well as many other needs beyond commercial grid power. SunPumps trademark high -quality manufacturing make the SCP series pumps the ultimate in DC powered pool pumps.
